E. M. Kime & Sons

SMALL FRUIT PLANT FARMS
TWELVE MILE, INDIANA

GREETINGS—

We are pleased to present to you our new plant catalogue, which gives you the greatest opportunity you have ever had to save money on your plant orders. This book is full of genuine bargains on high grade plants and we have quoted you rock-bottom prices on every variety. You have to economize and make every penny count this year. We know that every one is short of money, so our prices must be the lowest and our values the best if we intend to get your orders.

E. M. Kime

This fact explains why we have cut our prices to the limit and have sacrificed our profits at every turn. No one can meet our prices when quality and service are considered.

You will probably receive many catalogues this season, listing many varieties of plants, but just remember that Kime's catalog is offering you the best in each class; the kinds that produce the most and the finest crops of fruit and flowers. Do not waste your time grow-

Claude B. Kime

ing inferior plants when you can purchase vigorous, healthy, well rooted stock from us.

When you grow berries, fruits and flowers you are producing the greatest health giving things in the world. It means the joy of achievement and success whether it be a rose, a strawberry garden or a whole orchard. You get a real kick out of showing your friends something that your own labor and care have produced. Why not use that extra space in your garden for a strawberry bed. Send us your orders, we will do the rest.

Dwight M. Kime

Very sincerely,,

E. M. KIME & SONS, Twelve Mile, Ind.

NEVER BEFORE HAVE OUR PLANTS HAD BETTER QUALITY THAN THIS YEAR'S SUPPLY

Place Your Small Fruit Plant Orders With Kime's. Your Order Can Be Handled Promptly, No Matter How Large or How Small.

We Guarantee Complete Satisfaction. Mail, Wire or Phone your Orders.

Reference—Local Express Agent, Postmaster, Twelve Mile State Bank, Twelve Mile, Ind., or Peru Trust Co., Peru, Ind.

No Extra Charge for Boxing or Packing.

See the Other Fellow's Catalogs. But Be Sure and See Our Prices.

FOR MORE THAN TWENTY-FIVE YEARS

We have grown Strawberries and plants. We have furnished Nurserymen, Seedsmen and large growers throughout the country with our HIGH GRADE STRAWBERRY PLANTS of which we make a SPECIALTY.

NO ORDERS TOO LARGE OR TOO SMALL

Our present crop of strawberry plants is one of the largest we have ever grown. Our fields are the finest we have ever had, therefore our prices are greatly reduced. The climate here in northern Indiana is ideal for the growing of small fruit plants owing to the long growing season which develops a well balanced plant with a fibrous root system. These are plants that will please the most critical buyer.

When ordering your plants be sure to include some of KIME'S DELICIOUS MUSKMELON seed. We are sure you will be more than pleased.

ABOUT OUR PLANTS

We grow millions of plants of all varieties on our fruit farms and by proper cultivation and fertilization we grow vigorous, healthy, well rooted plants. We select our planting stock with care and use only the best of mother plants. All of the varieties listed in our catalogue represent the finest in their respective class. By buying your plants direct from us you receive better plants; better and more prompt service.

We are very busy here but we take time to be friendly, come and see our plants growing. Our friends and patrons are always more than welcome.

E. M. KIME & SONS

Twelve Mile, Ind.

A SELECTIVE LIST OF VARIETIES

We are offering you a fine list of varieties that cover the season from early to late as well as the leading Everbearings. Also several new ones that have been recently introduced. This list, which comprises 18 varieties, can be made to serve you. If you are still listing some of the older ones, and would like to get in on some of the better Sales Varieties of recent introduction, we offer you our years of Experience in getting a list for you that will increase your Strawberry plant sales. We invite correspondence.

CLEAN TRIMMING OF PLANTS

Plants received from the Nursery well trimmed not only save time when setting, but transportation charges, as you are not paying for excessive decayed foliage on clean trimmed plants, and very often a loss in plants by this excessive foliage heating in transit causing bud decay or dried roots. This is an important part of our plant diggers each year in cleaning all plants thoroughly to help our customers further in making their harvest a bumper one.

WE GIVE A SPECIAL 10 PER CENT DISCOUNT FOR EARLY ORDERS

If we can persuade our customers to order early, we can get all the work preliminary to shipping done before the shipping season arrives. This saves us the big expense of costly inexperienced help during the rush season. To persuade our customers to order early we allow a Special 10 per cent Discount on all orders amounting to \$5.00 or more received by March 15th provided full cash is received with order. No Discount after March 15th.

KIME'S GLADIOLUS MIXTURE

Gladiolus are a general favorite, very fine for cut flowers; they last longer and open best in water. These flowers do best in a rich sandy loam, but will thrive in any soil except a stiff clay. Bulbs should be planted during April or May, depending on soil and climate. Set bulbs 2 to 4 in. deep, and 2 in. apart, in rows 12 inches apart. Bulbs should be taken up and stored in the fall.

This mixture is composed of all new varieties; both the Ruffled and the Primulinus, and of many brilliant colors. These bulbs if purchased alone, would range from 10c to \$1.00 per bulb. We are offering them for the small sum of 30c per doz. Prices given here are postpaid.

Mastodon Strawberries A Specialty

“BIGGER AND BETTER BERRIES”

**Mastodon the King of the
Everbearers**

Can't you just taste that delicious Shortcake made from those Juicy, Red MASTODON Strawberries?

If you have never known the thrill of picking baskets of luscious, ripe, red strawberries from your own garden, try it this summer and fall. You will be surprised and delighted when you see these wonderful plants fruiting.

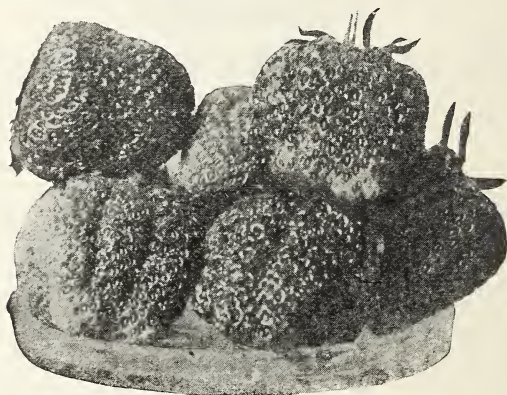

Why waste your time growing ordinary varieties, when you can GROW KIME'S MASTODON PLANTS AND HAVE THREE CROPS INSTEAD OF ONE, on the same amount of ground. The Mastodon begins bearing in ninety days after planting and continues until freezing weather. The next season they will produce a larger and more profitable crop than any other variety which you could plant. The plants are strong growers and good plant makers. While this wonderful berry is a native of Indiana, we have found that it does equally as well in all sections of the country. The plants are easily grown and need no special care or soil. Our plants were taken from the original plot and are genuine Mastodons, guaranteed true to name.

This wonderful plant is the heaviest yielder and has the largest berries of any known everbearer. The berries are a bright red color, very fine flavor, and very firm for shipping purposes. Also the berries are uniform and large throughout the season, not running small later on, as some varieties do. Everyone is surprised and more than pleased with the Mastodon.

Lots of you folks are looking for an opportunity to make a little extra money, why not try a few rows of Kime's Mastodon plants and thus obtain this extra money easily and quickly. On our own farms these plants often produce for us the first year from \$500.00 to \$800.00 per acre in fine fruit. Every plant comes to you ready to produce loads of fine berries in a short time after planting. You can make a larger profit from a few rows of Kime's Mastodon plants than could be obtained from raising chickens or truck of any kind. It is not necessary to have a large plot of ground, whether for town or country, 100 to 300 Mastodon plants make a nice garden plot for the average family.

YOU GET YOUR BIG PROFITS FROM THE OUT-OF-SEASON BERRIES, of which the Mastodon is a very fine producer. We receive the same price, for one crate of these wonderful berries that we do for two crates of the ordinary variety.

The Mastodon berries are a real treat, they make the very finest of preserves and are excellent for canning purposes. Get your order in early and avoid disappointment. The plant crop may run short later in the season. We will be glad to help you raise your plants and berries. Write us. Price \$1.70 per 100; \$10.00 per 1,000.

KIME'S PROGRESSIVE EVERBEARER

The Progressive Everbearer is a universal favorite; strong grower and heavy producer. Berries are large to medium, dark, glossy red in color. It is easily grown, succeeds in all soils and climates. The favorite for the garden and home market.

Kimes Progressive gives you a large crop of the choicest berries the same year that you set the plants, and three big crops in all, in 18 months. Price, \$1.35 per 100; \$8.00 per 1,000.

ALDRICH EVERBEARING

This berry was originated by Moses T. Aldrich of Putnam, Conn., and was introduced by L. J. Farner in 1931, from whom we purchased our supply of plants. Mr. Farner says it is the finest berry he has ever raised and states the fact that every plant produces fruit; that this fruit is the most attractive and saleable of any everbearing variety.

yet introduced. It is a very good shipper and long keeper together with the fact that it has produced fruit at the rate of 4,000 quarts to the acre, in the fall of the first year set.

The plants of the Aldrich Everbearing are small to medium in size but have great vitality and if given good care, make a fine row the first year. The flavor is very fine. We offer only a limited number of plants this year. 10 plants for \$1.00.

NEW BLAKEMORE STRAWBERRY (Perfect)

EXTRA EARLY VARIETY

The New Blakemore Strawberry (U. S. D. A. No. 659) was originated from a cross of the Missionary and Premier in 1923 by the United States Department of Agriculture. It was named in honor of Marcus Blakemore, president of the National Preservers Association. The berries are very firm, bright red in color, tough skin, solid center with excellent flavor. It produces runners in abundance and fruits about two weeks earlier than the Premier. Has higher Pectin content than most varieties and is slightly blunted conical in shape with broad shoulders and slim neck.

The plants should be set about 24 in. apart, if set closer they may get too thick. This new strawberry is recommended by the United States Agricultural Department and should be tried out in your state. Price, \$1.20 per 100; \$7.00 per 1,000.

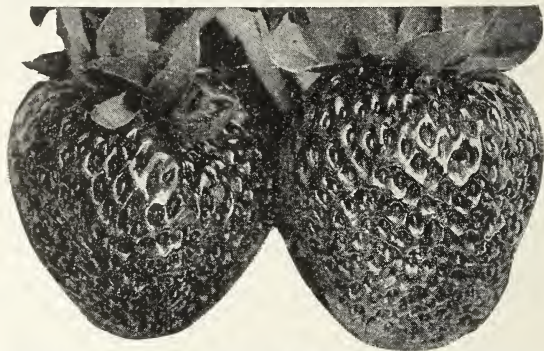

PREMIER (Perfect)

THE EARLIEST OF ALL EARLY VARIETIES

The PREMIER has gained such a nation-wide popularity in the last few years that it has been almost impossible to produce them in quantities large enough to supply the demand. They are adapted to all soils and climates and are without a doubt the very best early berry grown. The berries ripen over a long season and produce loads of large slightly pointed berries, holding their bright red color to the center. The berry is firm

and a good shipper. The plants are large, long rooted and the foliage is a beautiful dark green in color. One of the very best qualities of the Premier is the fact that it is almost frost proof. If you have never seen any of these plants fruit you should certainly try some of them this year. 90 cents per 100; \$5.50 per 1,000.

RED GOLD STRAWBERRY (Perfect) **EARLY VARIETY**

The Red Gold Berry which was originated by Charles F. Gardner, is a new and very early variety. Mr. Gardner says it begins bearing about the same time as the Premier but continues fruiting long after the Premier has gone. This berry is a bright, shining, red color, very firm and meaty, making it fine for shipping purposes. Also the berries are extra sweet with that good old-fashioned, wild strawberry flavor. It is a very heavy yielder with extra large berries and stout vigorous fruit stems which hold the berries up from the ground, making picking a pleasure.

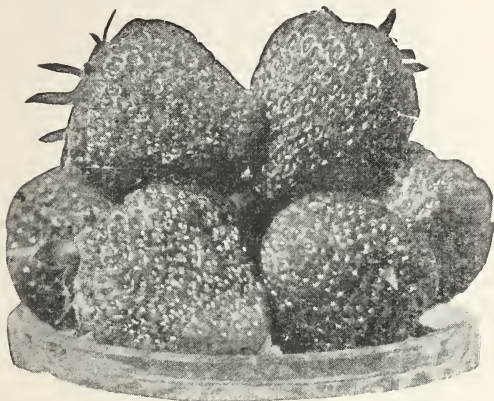

The Red Gold crop is assured under almost any kind of weather conditions, as the fruit stems having so many buds, open up over such a long period, that a frost or rainy spell during the blooming season, only catches the few blossoms that are open, leaving the rest of the buds to open later. The Red Gold is a good plant maker, with strong deeply penetrating root system which is frost and drought resistant to a remarkable degree. Include some of the Red Gold plants in your order this season, and give them a trial. \$1.00 per 100; \$5.75 per 1,000.

DR. BURRILL (Perfect) **A GOOD MID-SEASON VARIETY**

The Dr. Burrill should be included in every order sent us this season. It is a wonderful canning berry, very similar to the Dunlap, having a dark, rich color, medium large and firm enough to make a fine shipping berry. The Dr. Burrill will make a heavy fruit row under the most adverse conditions, and if you have been having trouble getting a good row here before, just have us include some of these plants in your order this season and we are sure you will be pleased. We think this is one of the best all-around berries on the market today and is fine for home canning and canning factory alike and for short cake they are simply delicious. 80 cents per 100; \$4.50 per 1,000.

SENATOR DUNLAP (Perfect)**A FAVORITE MID-SEASON BERRY THE
WORLD OVER**

When you say "Senator Dunlap" there is not a whole lot to add, for almost every one is familiar with this variety. It is a great favorite with those who do not have much time to spend with their plants after setting, because there is not a berry grown that will come as near taking care of itself. It is a heavy plant maker and at the same time a heavy fruiter. The berries are medium size, well shaped and a deep dark red color, making them suitable for canning purposes. They give best results when grown in narrow rows. 75 cents per 100; \$3.50 per 1,000.

**HAVERLAND (Imperfect)****(MEDIUM EARLY) ONE OF THE BEST OF ALL
THE OLD STANDARD VARIETIES**

Although the Haverland is an imperfect bloomer and a lot of Nurserymen do not quote it any more, we know it to be one of the best medium early berries that has ever been produced. The blossoms of the Haverland are very hardy, and there are very few that can equal it for productiveness. The berries are large, long, conical in shape and rather light in color. They are firm enough to stand shipping in moderate distance. The Haverland is fine for table use and for strawberry preserves we think they are unexcelled; they being a lighter color than most varieties, make a beautiful bright red preserve that tastes as good as they look. We find the Dr. Burrill, Sen. Dunlap or Gibson, three of the best varieties to mate with the Haverland as they will bloom at about the same time. The plants should be well mulched if possible, as the fruit stems are not able to hold the great crop of berries off the ground. Price, \$1.00 per 100; \$6.00 per 1,000.

GIBSON (Perfect)**A REAL MONEY MAKING MID-SUMMER
FAVORITE**

The first good point we want to tell you about this variety is, that it produces an abundance of

large solid berries and that they hold their size throughout the entire picking season. We believe this is due to the extra large healthy plant that this sort produces, having a long root system and being almost immune to diseases. Whether you grow berries for the market or home we recommend Gibson. The plant is a perfect bloomer and an exceptionally fine pollenizer, making it a good one to set with imperfect varieties. The Gibson is a wonderful shipper and of all the strawberries we have ever tested and fruited we find it to be one of the most productive and profitable. Don't overlook these facts. Price 75 cents per 100; \$3.50 per 1,000.

BUN SPECIAL (Perfect)

A SPARKLING MID-SEASON BERRY

You can never appreciate the beauty of this berry until you see a case of them packed for the market and you never appreciate the flavor of them until you taste one. This is a very large berry, deep red in color, evenly shaped with a glossy surface that looks like it had been varnished. This is a fine berry for home market and general use; has a wonderful flavor and certainly does present a beautiful appearance. The plants are vigorous growers, making extra heavy rows and yielding a large amount of fruit. It certainly is a pleasure to raise the Bun Special. We urge you to place your order early, so we can reserve some of these plants for you. 90 cents per 100; \$5.50 per 1,000.

COOPER (Perfect)

THE HUGE MID-SEASON BERRY

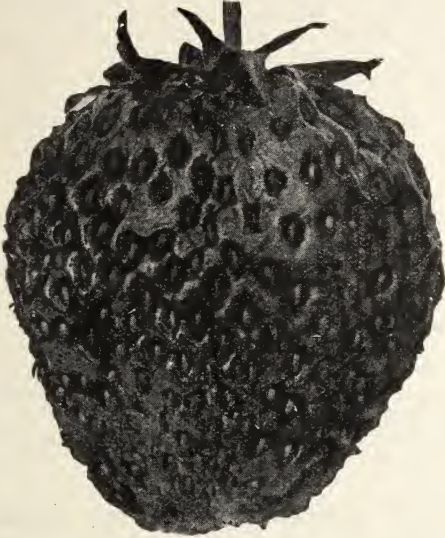

This is an extra large berry and solid throughout; is light red in color and very sweet in taste. This is a remarkable berry for its large plants and heavy fruit stems, which hold the berries up off the ground, keeping them clean at picking time. This plant does well in any kind of soil, setting enough runners to make a good fruiting row and leaves being very resistant to insects. They produce loads of fine berries when grown in narrow rows, but are not firm enough for distant shipment. \$1.15 per 100; \$6.50 per 1,000.

HARVEST KING (Perfect)

EARLY TO LATE

A new strawberry, very fine, originated in Northern Michigan and introduced by Henry Emlong & Sons. An exceptionally hardy, vigorous sort, unusually free from frost injury, and apparently capable of bringing a crop of fruit to maturity, almost regardless of weather conditions. Harvest King blossoms late, thereby protecting itself from late spring frosts. It matures rapidly and ripens with Gibson, Senator Dunlap and other varieties of similar season. This berry is similar to the Premier and it is claimed by the introducer that Harvest King is even more productive than the Premier, and that it excels not only in a commercial way on account of its heavy fruiting tendency, and generous supply of large, delicious flavored, deep red colored fruit, but on account of its superior canning qualities as well; claiming also that for this

use it requires less sugar than any other variety, and that it requires its original fine flavor and appearance after cooking. The plants are perfect flowering, requiring no other variety as a pollinizer. Foliage is abundant and healthy, furnishing protection to both blossoms and fruit. Our stock is genuine Harvest King and absolutely true to name. \$1.20 per 100; \$7.00 per 1,000.

BEAUTY

MIDSEASON TO LATE (Perfect)

Originated in Michigan this new berry is a hardy and vigorous grower which makes a good fruiting row. The plants attain a height of 8 to 12 inches, having large leaves to protect the berries from the hot sun and heavy fruit stems to hold the fruit well off the ground, where it will ripen evenly.

The berries are large in size, very juicy yet exceptionally firm; of high flavor, sparkling, red color and good keepers. Some growers say you can keep the "Beauty" for two days after picking and they will still be in perfect condition.

You will have no trouble in finding a market for your "Beauty" and at a higher price than most varieties bring. The fruit requires very little sugar when serving and canning. This quality adds greatly to the value of the variety. We know you will be pleased with the "Beauty". \$1.30 per 100.

NEW WASHINGTON (Perfect)

This wonderful new berry was introduced last year by Kelloggs of Michigan. It has a peculiar, rich, honey sweet flavor. Heavy bearing variety of rich, dark red fruit. The berries are very large in size and of good firm shipping quality. A wonder for sturdy, hardy growth. More than 300 berries have been counted on a single plant.

Don't fail to include some of our Washington plants in your order. Price \$1.70 per 100.

AROMA (Perfect)

THE MOST DEPENDABLE LATE VARIETY.

The Aroma is the most dependable late market berry grown being very vigorous and productive. Owing to its perfect shape, rich color and fine quality is perhaps the best shipping berry on the market. and will stand all sorts of rough handling. In the Southern States where the strawberries are mostly shipped, Aromas are grown almost exclusively; but they will do equally as well in any of the States, as they do in the South. They start ripening just before the Cooper and Gibson and continue a week to ten days longer, lengthening the berry season wonderfully. We know you will like this berry. 95 cents per 100; \$5.00 per 1,000.

CHESAPEAKE (Perfect)

FANCY LATE VARIETY

The Chesapeake is a handsome berry; large and smooth, rich red in color with a glossy surface and a bright yellow seed. It is of a very fine quality which makes it a good one for distant shipment. The Chesapeake requires a good rich loam to make plants enough for a good fruiting row; it produces a medium number of large healthy plants rather than a large number of small ones. The plants are very productive and the berries hold their size throughout the picking season. These are the best fancy late berries grown. 90 cents per 100; \$5.50 per 1,000.

A REAL BARGAIN (Surplus Plants)

SOME OF OUR BEST VARIETIES OF STRAWBERRY PLANTS AT \$3.00 PER THOUSAND.

It has always been our custom to thoroughly clean out our packing house every day during the shipping season, and as it is impossible to dig the exact number of plants required to fill the day's orders, we frequently find that we have a surplus of some varieties. We also plant more of some varieties than the demand will consume and rather than destroy these plants we offer them to you at a very reasonable price. We cannot guarantee to supply any certain variety, but they will be one or more of the standard varieties that we have listed in our catalog, and whenever possible we will label those plants, true-to-name. If you are not particular about varieties, just want good Strawberry plants, this will enable you to plant a patch at a big saving. When ordering, use the term: Surplus Plants. 70 cents per 100; \$3.00 per 1,000.

Springfield, Mass., Nov. 12, 1931

E. M. Kime Sons, Twelve Mile, Ind.

Dear Sir:—The strawberry plants that I got of you last spring sure did fine, never lost a plant. The muskmelons are great, far better and larger than any I ever grew before. I had no trouble disposing of our surplus melons of this variety. Don't forget to send me your next catalogue.

Yours truly, F. J. M.

E. M. Kime & Sons,
Twelve Mile, Ind.

Winamac, Ind., March 12, 1931.

Dear Sirs:

I am sending check for Mastodon strawberry plants. I bought 100 plants of you last year and had berries all summer and picked three quarts the first Sunday in November. They certainly were fine plants.

Yours very truly, Mrs. C. G.

GENERAL INFORMATION

Read Carefully Before Ordering.

When to Order—Send in your order early and avoid being disappointed. The sooner we receive your order after your catalogue reaches you, the better service we can give you, for early in the season we have a complete stock of all varieties and you can be sure of getting the plants you want. Plants set out early get a good start before dry weather comes and we believe in co-operating with nature.

How to Order—Use order blank which is provided. Be careful to fill all blanks properly and write name and address PLAINLY. We acknowledge all orders promptly. Always keep a copy of your order for reference and be sure to keep your acknowledgment until you receive your order.

When We Ship—We ship during March, April and May and we fill no orders for less than 25 plants of one variety. We will ship your plants on the day specified on your order blank, providing weather will permit digging. If you do not specify time to ship we will use our own judgment.

Method of Shipping—We ship by Parcel Post and Express.

True to Name—While we use every precaution to have all plants, etc., true to name, we will not be responsible for any sum greater than the cost of the stock should any prove otherwise than as represented.

Guarantee—Should your plants be received in poor condition, we will make adjustments, provided you make your complaint, accompanied by proper proof from your Postmaster or Express Agent within five days after you receive your order. If we should be out of varieties you order, and you do not wish us to substitute, we will gladly refund your money. Certificate of inspection accompanies each order.

Terms—Full remittance should accompany each order amounting to \$5.00 or less, One-third payment will reserve stock on large orders, balance to be paid before March 15th. Full payment should accompany all orders after March 15th.

Please remit by Check, Bank Draft, Express Money Order or Postoffice Money Order. If currency is sent be sure to register letter.

PARCEL POST SHIPMENTS

For small orders or those weighing less than 50 lbs., we recommend parcel post shipments. The package is then delivered direct to your door and you pay the postman just what the postage is.

WE SHIP ALL POSTAL ORDERS C. O. D. FOR POSTAGE

Do not send us any money to pay postage on your order, as it is better and cheaper for you to pay the charges when the package arrives. It is almost impossible to estimate correctly just what the weight of your plants may be, so that we send all parcel post shipments C. O. D. for the postage. These packages are given preference by postal clerks and

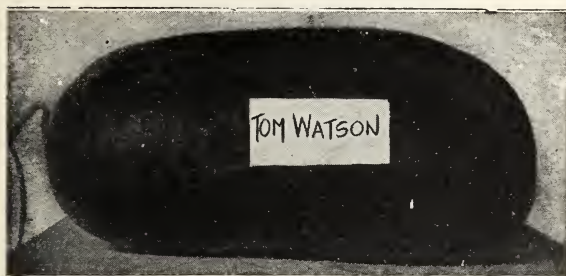

more prompt delivery is made. When you send us your order say "ship by parcel post", and your shipment will come forward in that manner, C. O. D. for the postal charges.

EXPRESS shipments are all made, the customer to pay transportation charge on arrival of goods. unless otherwise arranged by letter.

WE MAKE DIRECT SHIPMENT UNDER YOUR TAGS IF DESIRED

We are prepared to make shipments for Nurserymen and Seedmen under their own tags direct to their customers at a very reasonable packing out charge.

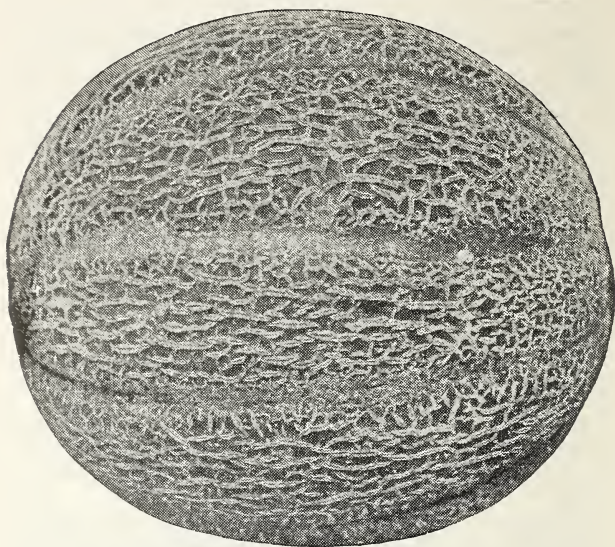

We are equipped to handle all orders promptly, taking care of all Prepaid and C. O. D. shipments; saving you money by eliminating extra Transportation and handling charges, as well as packing charges. Any one wishing to take advantage of this offer, we will be glad to give them further information. Our service will please you.

WATERMELON

Genuine Tom Watson, Greatest Favorite as a Shipping Melon, and Excellent for Home Markets, Sweet, Crisp and Coreless.

Our seed of this grand variety has been carefully bred and selected from Perfect Specimen Melons and is used annually by thousands of planters, many of whom grow exclusively for market, so we feel safe in saying it "Excels" in Quality and Quantity any strain of this variety we have ever seen, and we try them all in our Mammoth Trial Grounds. Cream of all the melons for home use or long distance shipping, combining the luscious flavor of the "Kleckley Sweets" with the fine shipping qualities of "Alabama Sweet," and "Georgia Rattlesnake," making one ideal melon for all requirements. Medium early, oblong, of attractive appearance, uniform in shape and quality; the luscious flesh is as sweet as honey, melting, and of delicious flavor. Fruits average 35 to 40 pounds, 28 inches long, 12 inches in diameter; skin very dark green. Combining the sterling qualities of the best the world produces in the melon line, we do not hesitate to recommend it above all others as the **one best**. Our seed is of the originator's strain, carefully selected and bred to retain the highest possible quality. This is the money-maker. (See photograph.) Pack-
et, 10 cts.; oz., 20 cts.; $\frac{1}{4}$ lb., 45 cts.; $\frac{1}{2}$ lb., 80 cts.;
lb., \$1.50; 2 lbs., \$2.80; 5 lbs., \$6.50, postpaid.

Kime's Delicious Muskmelon

Medium Early Variety

The flesh of this melon is thick, very tender and a beautiful golden, salmon color. It is very sweet and delicious and has an excellent flavor. "Kimes Delicious" ripens clear to the skin, the thick flesh leaving only a small seed cavity, with very few seeds. These melons are very large nearly round, slightly ribbed and covered with a dense netting of grayish color. These melons will average 4 to 8 pounds each and we have raised them that weighed as much as 15 pounds.

This melon originated on our farm several years ago. We have been growing an acre or so of these melons for our local market, for the past few years. They will net the grower \$150 to \$200 per acre, each year, with ordinary care. When you sell a Kime's Delicious Muskmelon, you have gained a steady customer, for your product. We have a fine lot of seed, from selected melons, to offer this year. Pkt., 15c; 1 oz., 25c; ¼ lb., 45c; 1 lb., \$1.50; 5 lbs., \$6.50, postpaid.

E. M. Kime & Sons, Yankton, S. Dak., March 4, 1931.
Twelve Mile, Ind.

Dear Sir:

I want to tell you of my success with the 1 lb. of Delicious Muskmelon seed which I purchased from you last year.

One dealer that runs a melon stand in the city came and bought melons from me and came back soon afterwards and contracted for all I had in the patch. He asked me to put in a big acreage this year for him and that's why I'm increasing my order for them. I have been in the business of growing melons for 35 years and this has proved to be the best melon in all that time. Yours truly- H. W. S.

Trowbridge, Illinois, April 27, 1931.

E. M. Kime & Sons,
Twelve Mile, Ind.

Dear Sir:

Please send me postpaid 1 oz. of your Delicious Muskmelon seed. I sent to you people last year for an ounce of seed, and I raised the finest and best flavored melons I ever raised in my life.

Yours truly, Wm. S.

Strawberry Culture

We have had so many inquiries about how to set and raise strawberries that we will endeavor to outline some of the main facts about the way we do it.

VARIETIES—In the first place we would say “investigate before you invest”. Decide on the varieties you think you would like best, then be sure and order them from a reliable house that will send you true to name plants that have been State inspected. Note carefully the descriptions of plants in the catalogue and do not order Imperfect or pistillate varieties alone because they will not bear perfect fruit if planted alone, but if inter-planted with Perfect or staminate varieties they will bear perfect fruit. There should be at least one row of Perfect bloomers to three or four of Imperfect ones. This one little mistake on the part of the buyer has been the cause of many harsh things being said about the seller.

SOIL AND PREPARATION—Strawberries will thrive well in any ground that will produce vegetables or any farm crop, outside of old timothy sod which should be avoided on account of grub worms. The preparation of the ground is not very difficult, requiring more inclination than information, which means don't be afraid to work your ground. Plow ground as early as possible in the spring, harrowing and dragging down several times before setting plants. We think that one mistake a great many people make is in setting their plants before their ground has been packed down.

FERTILIZERS—Any good stable manure added to the ground before plowing will help to produce more thrifty plants and nicer quality of berries. In case stable manure is not available, you can use a commercial fertilizer that is best suited to your ground. Your local County Agent will gladly supply you with information about the kind of fertilizer you need.

PLANTING SYSTEM AND NUMBER OF PLANTS TO USE—There are two common ways to set plants, in the matted row and hill system. We prefer the matted row system. We make the rows three feet eight inches apart and set the plants 16 to 18 inches in the row. When plants begin to put out runners these should be turned so they will run parallel with the original row, keeping the row 12 or 15 inches wide. The row system will require approximately 8 000 plants for an acre. For the hill system the plants should be set about 15 by 30 inches and all runners removed leaving nothing but the first plant set. This method will require about 13 to 14 thousand per acre.

TIME TO SET PLANTS—In the northern and central states, April and May are the best months in which to set plants but in the southern states they can be set as early as February and March.

HOW TO SET PLANTS—In setting plants, use a spade pushing in stright down, then forward; place roots of plant in opening with roots spread out, remove spade and press soil firmly against roots with foot. Be sure you have the crown of the plant just even with the top surface of the soil for if you set them too deep they will smother and if too shallow the roots will dry out. In case weather will not permit setting plants as soon as they arrive, you should make a V-shaped furrow, opening the bunches and spreading them thinly in the furrow with the roots down, keeping the crowns even with the surface and pressing the soil firmly against the roots.

CULTIVATION—We start cultivation as soon after setting as possible and give them frequent shallow cultivations all summer, keeping the ground as level as we can and weeds from around the plants with the hoe. We use just an ordinary corn plow one time alternating with a one horse harrow the next, endeavoring to maintain a dust mulch which will hold moisture and keep the plants growing through a dry spell. Be careful not to cover the crowns with soil.

REMOVING BLOSSOMS—Plants set in the spring will start blooming soon after they are set, and these fruit stalks should be removed the first year as these will weaken the plants. Everbearing varieties should have the fruit stems removed until early July after which they may be allowed to fruit the rest of the season. A pair of scissors are very convenient for removing fruit stems.

MULCHING—Although strawberries are very hardy it is best to cover them with straw or leaves in the fall after the ground freezes, covering the entire ground and then in the spring as soon as you think the danger of frost is past take a fork or rake and pull straw into the space between the rows.

HOW TO PREPARE FOR SECOND CROP—After the plants have fruited the first year, the foliage may be mowed off and the rows cut down with a breaking plow, spade or hoe, and the plants be allowed to bear another season. After the second season it is best to plow the old plants under and set new plants on another plot of ground.

NUMBER OF PLANTS PER ACRE

	Number Plants	Distance Apart
Dewberry -----	1800	4 x 6 ft.
Strawberry Plants—Field -----	8000	1½ x 3½ ft.
Garden -----		1 x 2 ft.
Red Raspberry Plants -----	2400	3 x 6 ft.
Black Raspberry Plants -----	1700	3½ x 7 ft.
Blackberry Plants -----	1500	4 x 7 ft.
Grapes—Rich Soil -----	540	8 x 10 ft.
Poor Soil -----	440	8 x 12 ft.
Asparagus—Field Culture -----	5000	1 x 3 ft.
Garden Culture -----		1 x 1½ ft.
Rhubarb—Field Culture -----	6100	2 x 3½ ft.

SPACING DISTANCE FOR FRUIT TREES

Apple Trees -----	35 to 40 ft. apart each way
Pear Trees -----	20 to 25 ft. apart each way
Peach Trees -----	20 to 25 ft. apart each way
Sour Cherry Trees -----	20 to 25 ft. apart each way
Plum Trees -----	20 to 25 ft. apart each way
Sweet Cherry Trees -----	25 to 30 ft. apart each way

Baxter Springs, Kans., May 7, 1931.

E. M. Kime & Sons,
Twelve Mile, Ind.

Gentlemen:

I received the strawberry plants April 25th by C. O. D. in fine shape. Not a plant died. I am very much pleased with them.

Yours truly, M. B.

E. M. Kime & Sons,
Twelve Mile, Ind.

Portland, Ind., Oct. 27, 1931.

Dear Sirs:

Last spring I purchased some Mastodon strawberry plants from you and they were very fine plants, in fact I lost only two of the entire number. I am asking for prices on stock for next spring shipment. Can you furnish the plants and at what price?

Very respectfully, Dr. E. R. H.

WHOLESALE THRIFT PRICES MEAN YOUR PROSPERITY

Discount of 10 per cent on following list on orders of \$5.00 or more accompanied by cash received before March 15th, 1932 Strawberry Plants and Melon Seed included.

NOTE: All or part cash must be enclosed with every order. Fill out your order carefully. We will acknowledge it promptly.

PRICES NOT PREPAID—All F. O. B. north-eastern Indiana or southern Michigan. 500 or more of a variety at 1000 rates; less quantities of each variety at prices listed below.
